

IntelliJ Creating a New Project

This document will guide you through the process of Creating a new Java project in IntelliJ. Start by launching IntelliJ.

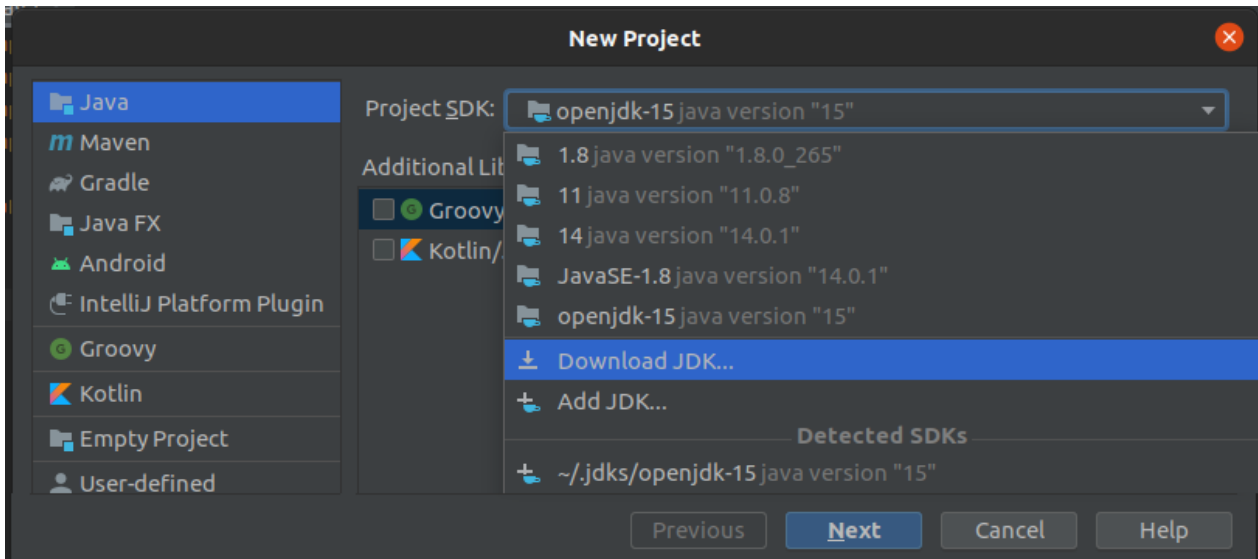

- Start by creating a "New Project"

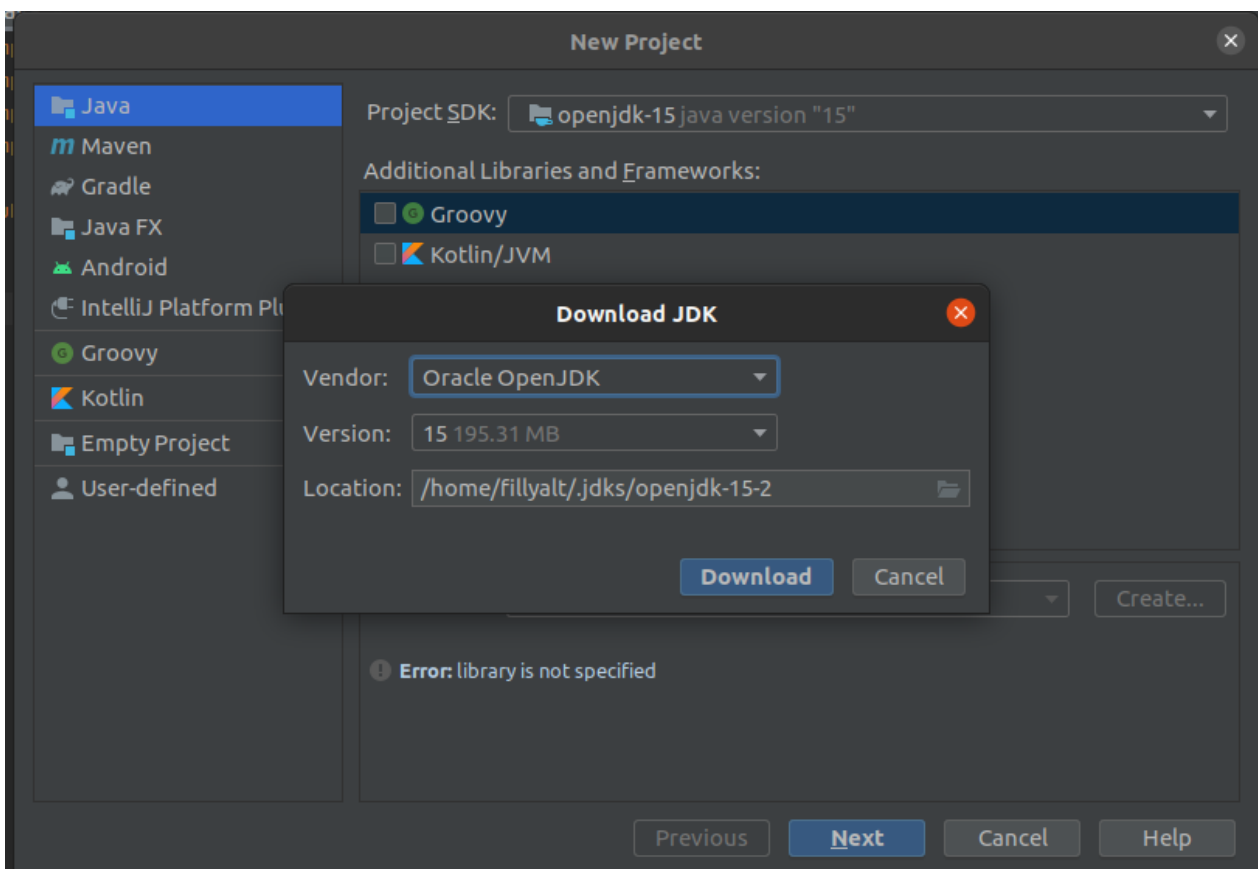

- From the new project screen do the following:

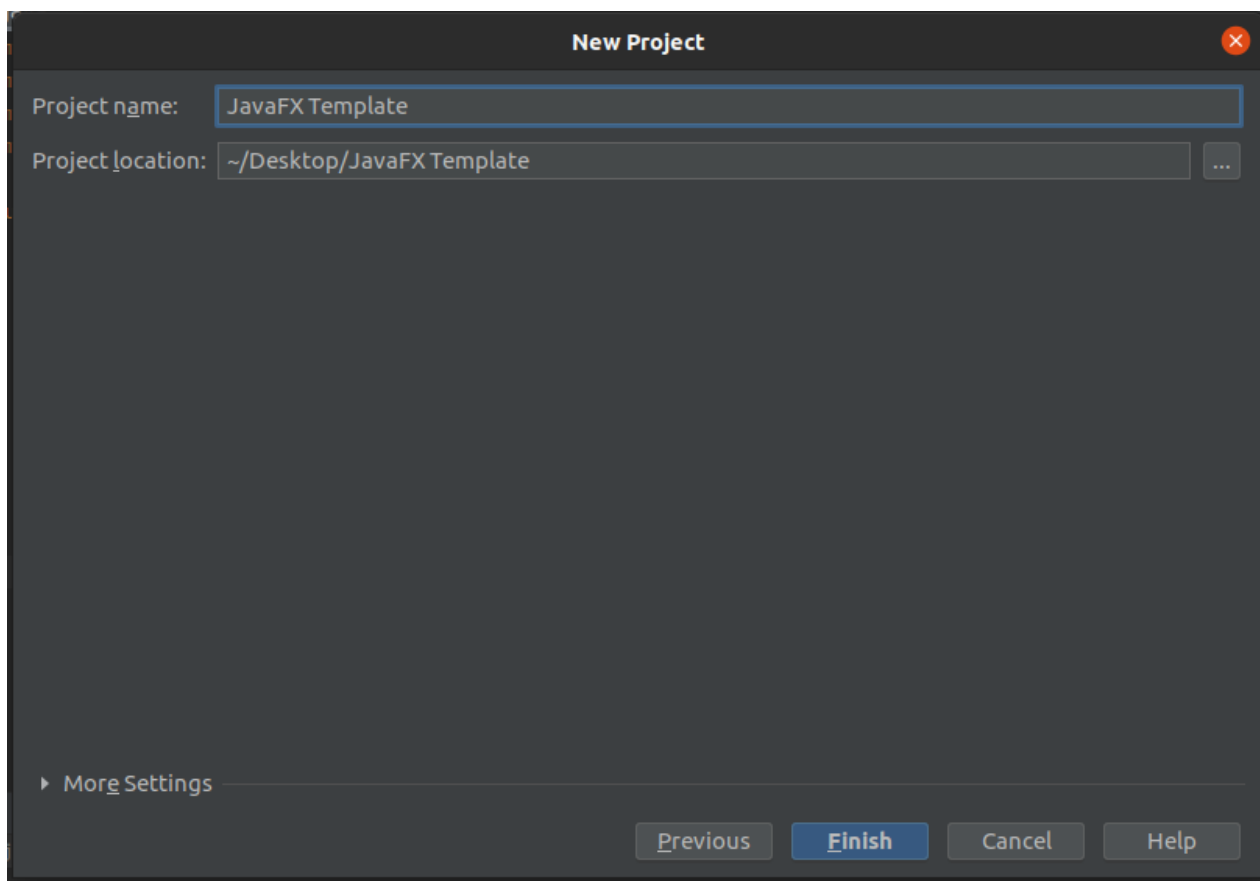

- Select Java on the left menu
- Select the drop down box "Project SDK"
- You will see an option Download JDK

- Download the latest version of the **Java SDK** (*Software Development Kit*)
- In Java this is referred to as the **JDK** (*Java Development Kit*)
- Select Oracle OpenJDK
- Select and download the latest version of Java (*15 in this example*)
 - **Please note:** the location line will be different for your computer

- Finish creating the project with the name of Your Choice
 - *Please Note: my screenshot shows this project is stored on my desktop. Please store your project in a location where it will not get deleted.*

- Select **Finish** and you are ready to start developing in Java
